DENHARCO LAUNCHES A NEW LINE OF ULTRA-PERFORMANT HARVESTERS

To optimize harvesting and minimize impacts

Montreal, May 26, 2005 – Denharco, a world leader in the design, manufacturing and installation of specialized forest harvesting equipment, today announced the launch of a new line of ultra-performant harvesting heads, the Series 300. This unique line of harvesters meets the requirements of North American forest companies from the standpoints of both performance and environmental impact reduction.

“Denharco has specialized in, and is renowned for the quality, performance, and reliability of its forest harvesting equipment. To continue our ‘Best-in-class’ strategy, meet the needs of our customers, and enable them to maximize their output, we decided to expand our range of product offering by developing a series of harvesting heads that will provide forestry companies with the best tools for all types of forests,” declared Mr. Fred Glucksman, President and Chief Operating Officer of Denharco.

The Series 300 includes four harvesting heads weighing between 2200 and 4200 pounds depending on the options chosen. The cutting capacity of the four heads varies between 21 and 28 inches.

The new harvesting heads perform as ‘best in their category’. They are based on the integration of proven technologies, optimized by Denharco engineers and specialists so as to maximize operational speed, availability, and precision ;all at very competitive prices. The introduction of these heads results from careful attention to the needs of forestry professional and more than two years of design, integration, and forest testing. These harvesting heads will provide the users with a rapid return on their investment.

The 300 Series harvesting heads, now available, are perfectly suited for cut-to-length forest harvesting operations. Visitors to Démo Forêt 2000, to be held May 25 through May 29, 2005, in Dolbeau, Quebec, will be able to discover the full potential of these new harvesting heads.

About Denharco

Denharco is a world leader in the design, manufacturing, and installation of forest industry harvesting equipment. Denharco products are designed to meet the exacting requirements of the forestry industry, particularly in the areas of felling, delimiting, processing, and log handling. From its head office in Saint-Hyacinthe, its sales and after-sales facilities throughout Canada and in the United States, and a network of 350 distributors, the company markets a full range of products in all North American forest regions. Inspired by nature, Denharco equipment is designed to ensure sustainable forest development. For more information, visit Denharco’s website (www.denharco.com).
